

NOXOZ.BE · BROWSER EXTENSION

ChatGPT Export

Export individual ChatGPT conversations and complete Projects to structured local Markdown + ZIP archives — now with physical Upload and Download file bundling.

PUBLIC RELEASE

v6.0.0 · source-available

@NoXoZ.be · Bruno DELNOZ

Product guide & feature reference

September 2026 · Independent project, not affiliated with, endorsed by, sponsored by, or developed by OpenAI

PRODUCT OVERVIEW

A local archive for serious ChatGPT work

ChatGPT Export turns long conversations and multi-chat Projects into readable, portable files you control locally. As of v6.0.0, uploaded and Assistant-offered files are both bundled physically, not just inventoried.

Full Chat Export the complete current conversation with message metadata and file context.	Full Project Traverse the chats in a ChatGPT Project and create one indexed archive.
File-aware Uploaded files and Assistant download offers are both physically bundled into Upload/ and Download/ when enabled.	Markdown first Open, searchable and version-control friendly output with no proprietary reader required.
Local-first No custom NoXoZ backend, analytics or telemetry. Exports are assembled in the browser.	Inspectable Developer logs expose crawl, message, Project and attachment metrics.

“One click to preserve a chat. One Project export to preserve the whole working context — files included.”

INTERFACE

Three modes: Button, Mini and Maxi

The interface can stay almost invisible or expose the full control surface when required.

Button mode Floating EXP control. Single click starts/stops a forced Full Chat export. Double-click opens Mini mode.	Mini mode Compact controls: Start Export, FULL/START/END, PROJECT, UPLOAD FILES, DOWNLOAD FILES and message count.
---	--

Maxi control	Purpose
Export Full Project	Export all discovered chats from the current Project.
Export Uploaded Files	Enable/disable physical bundling of retrievable User uploads into Upload/.
Export Downloaded Files	Enable/disable physical bundling of retrievable Assistant download offers into Download/.
Export Full Chat	Export the complete current conversation.
Export From Start / End	Export first or last N messages to Markdown.
Set your own location	Ask for a save location when supported.
User / Dev Switch	Developer diagnostics on/off.
Reload Ext / LOG	Development reload and downloadable diagnostic log.

Color rule: selected toggles/modes are blue; inactive options are gray. Position, size and options are stored locally.

EXPORT MODES

From one message range to a complete Project

Mode	What it exports	Output
Export Full Chat	Entire current conversation after crawl / expansion.	ZIP
Export From Start	First N collected messages.	Markdown
Export From End	Last N collected messages.	Markdown
Export Full Project	All discovered chats in the current ChatGPT Project.	Project ZIP + INDEX.md

Important: the N message limit applies only to START and END. FULL Chat and FULL Project ignore it.

How Project export works

1. Start from a chat inside the target Project.
2. Discover Project chats from the visible ChatGPT interface.
3. Navigate the same visible tab sequentially through those chats.
4. Reuse the Full Chat collector for each chat.
5. Return to the starting context and build one indexed Project ZIP.

No hidden fleet of background tabs is required. The workflow remains observable and can be diagnosed with Developer logs.

FILE INTELLIGENCE

Uploads and files offered for download, physically bundled

Uploaded files

Files attached by the User are detected by filename and represented inside the Markdown. When Export Uploaded Files is enabled, eligible bytes are bundled in Upload/.

Files to download

Clickable Assistant file offers are inventoried by count and filename in the chat Markdown header and Project INDEX.md, and their bytes are bundled in Download/ when enabled.

```
**File Uploaded:** `document.pdf`
```

```
Files to download: 2
```

```
- release_v5.0.20.zip  
- release_v6.0.0.zip
```

v6.0.0 scope: Download/ and Upload/ both receive physical bytes for retrievable files, building on the v5.0.20 implementation. Earlier v5.0.18 releases only inventoried Assistant download offers by count and filename — this is now resolved.

Failure-tolerant design

If a filename is detected but its bytes cannot be retrieved, the text export can still succeed. Developer logs record skipped URLs, failed retrievals and attachment counters. v6.0.0 also fixes malformed generated-download names (such as duplicated filename/type suffixes) and prevents ChatGPT's internal HTML viewer pages from being saved as Markdown/PDF/ZIP files.

ARCHIVE FORMAT

Structured ZIPs with ordinary Markdown

Full Chat

```
ChatName__export_YYYY-MM-DD-HH-MM-SS.zip
|-- ChatName__export_YYYY-MM-DD-HH-MM-SS/
|   |-- ChatName__export_YYYY-MM-DD-HH-MM-SS.md
|   |-- Upload/
|       |-- uploaded files (when enabled/retrievable)
|   |-- Download/
|       |-- downloaded files (when enabled/retrievable)
```

Full Project

```
Full Project - ProjectName__export___.zip
|-- INDEX.md
|-- Project - ProjectName - Chat01__export___.
|   |-- Project - ProjectName - Chat01__export___.md
|   |-- Upload/
|       |-- Download/
|-- Project - ProjectName - Chat02__export___.
|   |-- Project - ProjectName - Chat02__export___.md
|   |-- Upload/
|       |-- Download/
```

Design benefit: every chat keeps its Markdown and related file directories together, while the Project-level INDEX.md stays immediately visible at the ZIP root. As of v5.0.19, chat Markdown lives in the same directory as Upload/ and Download/; that layout is unchanged in v6.0.0.

INDEX.MD

A Project summary without opening every chat

The root index gives global totals and a per-chat inventory of messages and files.

```
# Full Project - Demo
Project: Demo
Export date/time: 2026-09-08 10:00:00
Total chats: 7
Total messages: 412
User messages: 198
Agent messages: 207

## Chats

1. **CHAT001**
  - File: `Project - Demo - CHAT001__export__...md`
  - Total messages: 47
  - User messages: 24
  - Agent messages: 22
  - Uploaded files: 3
    - document.pdf
    - image.png
    - README.md
  - Files to download: 2
    - release_v5.0.20.zip
    - release_v6.0.0.zip
```

If individual Project chats fail, INDEX.md can also contain an Export errors section so successful chats remain usable while failures are visible.

MARKDOWN OUTPUT

Readable metadata before the conversation body

```
# Project - Demo - CHAT001
Export date: 2026-09-08 10:00:00
Source: https://chatgpt.com/...
Total messages: 47
User messages: 24
Agent messages: 22

Files to download: 2
- build.zip
- report.pdf

...

## 1. user
...

...

## 2. assistant
...
```

Readable No proprietary viewer is required.	Searchable Use grep, ripgrep, desktop search or indexing tools.
Diffable Markdown works naturally with Git and text diffs.	Convertible Transform to HTML, PDF, DOCX or another format later.

QUICK START

Install and export in minutes

1 Install

Download or clone the public repository, extract the versioned folder, open `brave://extensions/` (or `chrome://extensions/`), enable Developer mode, click Load unpacked and select the folder.

2 Open ChatGPT

Reload existing ChatGPT tabs if the extension was installed after the page was already open.

3 Choose a mode

Mini for normal operation, Maxi for full control or Button mode for one-click exports.

4 Choose the export

Full Chat, Start, End or Full Project. Enable Uploaded Files and/or Downloaded Files if binary attachments should be bundled.

5 Save

Use the save picker when supported, browser Downloads fallback or a Developer Target Folder.

Tip: for a Full Project, start from any chat that belongs to that Project and let the visible tab complete its sequential navigation. See `INSTALL.md` in the public repository for platform-specific steps.

DEVELOPER MODE

Built-in diagnostics for real-world DOM changes

Timeout Increase the export timeout for very large chats or Projects.	Target Folder Choose direct output when the browser supports directory access.
Reload Ext Reload the extension and refresh relevant ChatGPT tabs during development/testing.	LOG Download a snapshot with version, state, page URL, metrics and runtime events.

Useful diagnostic signals: messages collected · containers seen · Show more rounds · crawl steps · Project chats · uploaded attachments · downloaded attachments · attachment failures

When a ChatGPT UI change affects detection, Maxi → Dev → LOG is the preferred diagnostic artifact.

PRIVACY & SECURITY

Local-first by design

No custom backend

No NoXoZ-operated export server, analytics endpoint or telemetry pipeline is part of the extension.

Local output

Exports are saved through browser mechanisms to local storage chosen by the user/browser.

Permission	Purpose
activeTab / scripting	Operate the extension on ChatGPT pages.
storage	Persist local UI and export settings.
tabs	Coordinate Project navigation, show/hide and reload behavior.

Allowed hosts

- https://chatgpt.com/*
- https://chat.openai.com/*
- https://*.oaiusercontent.com/*
- https://*.openai.com/*

Independent project: ChatGPT Export is developed by NoXoZ.be and is **not affiliated with, endorsed by, sponsored by, or developed by OpenAI**. Exported archives can contain sensitive conversation text and attachments — protect the local ZIP/Markdown with the same care as the original material.

LICENSE

Source-available, not open source

v6.0.0 is the first public-release baseline of the source-available repository, published under the NoXoZ Personal License v1.0.

What the public repository allows

Source inspection and authorized personal, non-commercial use of the official, unmodified release.

What requires written authorization from the Licensor

Redistribution, republishing, commercial exploitation, independent store publication, rebranding, and modified public releases.

Where to look

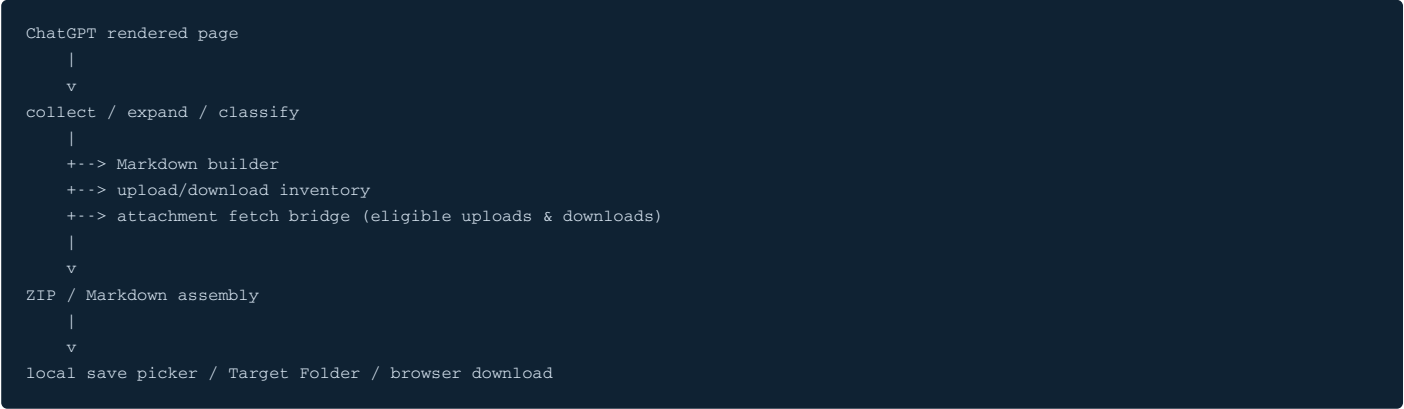

The complete terms are in `LICENSE` at the repository root, now included in the public package list alongside `README.md`, `INSTALL.md`, `PRIVACY.md`, `SECURITY.md` and `CHANGELOG.md`.

Author: NoXoZ.be — Bruno DELNOZ.

ARCHITECTURE

Simple runtime, observable workflow

Runtime file	Responsibility
manifest.json	Manifest V3 metadata, permissions, injection and icons. Declares v6.0.0 / version_name v6.0.0.
content-export.js	UI, crawl, role classification, Markdown, ZIP, Project index, file detection and diagnostics.
background.js	Toolbar behavior, Project coordination, tab navigation, extension reload and attachment fetch bridge (uploads and downloads).
export-style.css	Button / Mini / Maxi interface styling and Developer panel.

Why DOM/navigation based? The Project workflow is designed around the visible ChatGPT interface rather than a hidden dependency on an undocumented Project API. That keeps the workflow observable and makes DOM changes diagnosable through the built-in log.

USE CASES

Where ChatGPT Export is useful

Technical projects Archive architecture discussions, code generation, debugging trails and generated release files — now with the actual release ZIPs bundled in Download/.	Research Preserve multi-chat investigations with a root index and file context.
Documentation Turn an active ChatGPT Project into a local Markdown corpus ready for editing or publication.	Audit trail Keep source URLs, timestamps, message counts and filenames together in a portable archive.
Migration Move useful ChatGPT work into local knowledge bases or version-controlled repositories.	Collaboration Share a structured Project archive without requiring another person to navigate the original workspace.

FAQ

Common questions

Does N limit a Full Project?

No. N applies only to START and END.

Can it export uploaded files?

Yes, when Export Uploaded Files is enabled and the attachment is retrievable from permitted ChatGPT/OpenAI content origins.

Can it physically collect files generated by ChatGPT?

Yes. Since the v5.0.20 implementation carried into the v6.0.0 baseline, retrievable Assistant download offers are copied into `Download/`, in addition to being inventoried by count and filename.

Does it need a custom server?

No custom NoXoZ export backend is required.

What if a Project chat fails?

Successful results remain usable and INDEX.md can report individual errors.

Is this an OpenAI product?

No. ChatGPT Export is an independent project by NoXoZ.be, not affiliated with, endorsed by, sponsored by, or developed by OpenAI.

Can I redistribute or modify it?

Not without written authorization from the Licensor. The public repository is source-available under the NoXoZ Personal License v1.0 for personal, non-commercial use of the official unmodified release.

What is the best diagnostic?

Maxi → Dev → LOG, immediately after reproducing the issue.

Portable. Inspectable. Local.

ChatGPT Export @NoXoZ.be

Public release v6.0.0

This guide documents the public-release baseline v6.0.0. Runtime export behavior is based on the validated v5.0.20 implementation. ChatGPT is a third-party service; changes to its rendered interface can require extension maintenance. ChatGPT Export is source-available under the NoXoZ Personal License v1.0 and is not affiliated with, endorsed by, sponsored by, or developed by OpenAI.
