

ChatGPT Export

@NoXoZ.be - Product Guide v6.0.0

A Brave / Chromium extension for turning ChatGPT conversations and complete Projects into portable, structured Markdown archives with associated files.

Why it exists

I created ChatGPT Export because I consider complete, portable export of a full ChatGPT conversation or a complete ChatGPT Project to be a capability that is genuinely missing from the standard ChatGPT interface. The extension fills that gap with a local-first, inspectable workflow.

What it does

Full Chat	Exports the complete current conversation into a structured ZIP.
Full Project	Exports all chats belonging to the current ChatGPT Project.
Start / End	Exports a selected number of messages from the beginning or end.
Uploaded files	Inventories and optionally bundles User-uploaded files.
Downloaded files	Inventories and optionally bundles files offered by Assistant responses.
Project INDEX	Lists chats, message counts and detected filenames per chat.

Independent project: ChatGPT Export is not affiliated with, endorsed by, sponsored by, or developed by [OpenAI](#).

Interface

Maxi: Export Full Project, Export Uploaded Files, Export Downloaded Files, Export Full Chat, Export From Start, Export From End, Start Export.

Mini: FULL, START, END, PROJECT, UPLOAD FILES, DOWNLOAD FILES, Start Export.

Blue indicates enabled or selected. Gray indicates disabled or not selected.

Full Chat ZIP

```
ChatName__export_....zip
|-- ChatName__export_..../
|  |-- ChatName__export_....md
|  |-- Upload/
|  |-- Download/
```

The Markdown export is stored in the same chat directory as its Upload and Download folders.

Local-first workflow

Exports are assembled in the browser and saved through browser/local file mechanisms. No separate NoXoZ.be export backend is required.

Full Project ZIP

```
Full Project - ProjectName__export_....zip
|-- INDEX.md
|-- Project - ProjectName - Chat01__export_.../
|   |-- Project - ProjectName - Chat01__export_....md
|   |-- Upload/
|   |-- Download/
|-- Project - ProjectName - Chat02__export_.../
|   |-- Project - ProjectName - Chat02__export_....md
|   |-- Upload/
|   |-- Download/
```

INDEX.md remains at the root of the Project ZIP. Each chat receives its own isolated text/file directory.

File inventory

The exporter records counts and filenames for both User uploads and files offered by Assistant responses. When the corresponding export toggle is enabled and the resource is retrievable, the actual bytes are also included.

Failure-tolerant behavior

A text export can remain usable even when an associated file cannot be retrieved. Developer logs expose attachment/download counts and failures for diagnosis.

v6.0.0 public release

v6.0.0 is the public-release baseline built from the validated v5.0.20 implementation, with public versioning, licensing and documentation cleanup.

Download validation

Generated-file buttons in ChatGPT can expose UI labels such as DocumentOpen. The exporter normalizes polluted names such as `INSTALL.mdDocumentOpen` back to `INSTALL.md`.

The exporter also rejects a normal ChatGPT HTML viewer page when a Markdown, ZIP, PDF, image or other non-HTML file is expected.

Developer mode

Developer mode exposes crawl metrics, message counts, attachment counts, download counts, failures and an exportable diagnostic LOG.

Privacy and security

The extension is intended as a local export tool. It contains no analytics or telemetry endpoint and does not require a separate NoXoZ.be export backend. When file bundling is enabled, eligible ChatGPT/OpenAI-hosted resources associated with the active session can be fetched for inclusion in the local ZIP.

Exported archives can contain sensitive conversation text and attachments. Protect generated ZIP/Markdown files with the same care as the original material.

Installation

1. Download the official Release ZIP, clone the repository, or use GitHub Fork for contribution preparation.
2. Open brave://extensions/.
3. Enable **Developer mode**.
4. Click **Load unpacked**.
5. Select the directory containing manifest.json.
6. Reload ChatGPT.

Public package

```
manifest.json
background.js
content-export.js
export-style.css
icons/
README.md
INSTALL.md
CHANGELOG.md
SECURITY.md
PRIVACY.md
LICENSE
ChatGPT-Export_v6.0.0_Product_Guide.pdf
```

License

ChatGPT Export is proprietary and source-available under the NoXoZ Personal License v1.0. See the LICENSE file for the complete terms.
